

System solutions for every lift.
Everywhere.

LIFT CONTROL SYSTEMS

INTRODUCTION

**Philip Schmersal, Executive Director of the Schmersal Group, and
Dr. Andreas Hunscher, Managing Director of Böhnke + Partner GmbH Steuerungssysteme**

Solutions for Lifts and Escalators – Safe and reliable.

Lifts are among the safest means of transport. Control systems and switchgear from the Schmersal Group play no small part in this. For almost 50 years we have been producing switchgear developed completely from scratch for the special requirements of lift technology.

Like lift customer, the Schmersal Group has also taken the route to internationalization. We produce switchgear at the main factory in Wuppertal, in Boituva / Brazil (since 1974), Shanghai / China (since 1999) and Ranjangaon / India (since 2013). With the acquisition of Böhnke + Partner GmbH Steuerungssysteme to the Schmersal Group in 2013, the business area of lift technology was extended to the important area of control technology. All production sites are certified in accordance with DIN EN ISO 9001, thus all our products are manufactured to a high standard.

Experts are available for consulting, choosing control systems, components and also service in more than 50 countries. As an efficient supplier and partner, we collaborate both with global players in the lift industry and with specialised regional companies.

The programme is constantly being expanded in close collaboration with lift manufacturers. Today, for almost any conceivable application in which a complete lift control system or even just one switchgear is required we offer a reliable and high quality solution with practicality in mind – from the shaft pit to the machine room.

This brochure gives you an initial overview of our product range and its versatile application possibilities in the area of lifts and escalators.

- 8 Further Shaft Accessory

LIFT CONTROL SYSTEMS

ENHANCED

Individual High-End Lift Control System
with bp408 Controller

- Traction/Hydraulic Lift with Machine Room or MRL
- EN 81-20/50 and EN 81-1/2 (Modernisation)
- Simplex or up to a Group of 8 Lifts
- Up to 127 Floors
- Full Range of Interfaces and Unlimited Functionality

SMART

Configurable Standard Mid-Range Lift Control System
with bp408 Controller

- Traction/Hydraulic Lifts with Machine Room
- EN 81-20/50 and EN 81-1/2 (Modernisation)
- Simplex or up to a Group of 8 Lifts
- Up to 127 Floors
- CANopen Lift for Cabin (CAN1) and Shaft/Group (CAN2)
- Extended Functionality

ENTRY LEVEL

Configurable Basic Lift Control System with bp208-ECO

- Simplex Traction/Hydraulic Lift with Machine Room
- EN 81-20/50 and EN 81-1/2 (Modernisation)
- Up to 12 Floors
- CANopen Lift for Cabin
- Basic Functionality

Key Features

Configurable Basic Lift Control System with bp208-ECO

Lift Application Details

Type of Lift	Traction / Hydraulic
Installation Environment	Machine Room
Modus	Closed / Opened Loop Speed / Position Modus
Standard	EN 81-20/-50 EN 81 1/2
Type of Motor	Asynchron / Synchron
Main Power	400 V, 63 A, 30 kW
Neutral line	Without
Car Terminal Box	Included
Frequency Inverter	External (not included in package)
Frequency Inverter Type	Prepared for: Ziehl Abegg and Fuji
Door Type	Automatic, Manual Door and without Car Door
Supported Door Power	Designed for 230V Door A and B
Car Doors	1 ... 2, Simultaneous
Brake Range Doors Magnet	42 V, 50 V, 60 V, 80 V, 200 V and 207 V
Set/Reset Speed Governor	■
Floors	Up to 12 Parallel Inputs (no CAN available on shaft)
Lift Groups	No, only Simplex

Controller Details

Controller Type	bp208-ECO
Operation Modes	Full Collective Controller Push Button – without call storage Push Button – with call storage Simple one button collective direction dependend/independend
User interface	Illuminated, graphic LC-Display 7 push buttons
Interfaces	CAN 1 (Cabin) with CANopen Lift (CiA 417) USB Host USB RS-485 (DCP)
Software	Based on bp408
Update/ backup possibility	USB

Functionalities

Remote Access (WinMos)	-
Thermistor	■
Emergency Power Supply	-
Fire Alarm Evacuation	■
Fire Alarm Dynamic	-
Fire Fighting Service	-
Priority Calls	-
Guest Call Operation	-
Penthouse Control	■
Chemical Operation	-
Lift Attendant Service	-
Ramp control system (docking service)	-
SMZ	■

LIFT CONTROL MODULE

SCHMERSAL BÖHNKE + PARTNER LIFT CONTROL SYSTEMS

You can purchase our product with the peace of mind that we will always provide your organisation with industry leading technology and that your investment is safe in our hands.

COMPACT

Applicable for all kind of Installation Location
(Door Frame, Machine Room, Machine Room Less (MRL)).

SAFETY ON BOARD

Safety Circuit Integrated
No further modules needed for:

- UCM
- Pre-Opening Doors
- Re-Levelling
- Fast Start

Over **1500**
Features included

Over **30** Years of
Lift Control System Knowledge.

HIGHEST QUALITY

SERVICE AT ITS BESTS.

- All time Spare-part Commitment
- Repair
- Replace and Upgrade Solutions
- Online/On-Side Support
- Initial Commissioning
- User Training

- Permanent Online Status and Diagnosis Function on the Controller
- High stopping accuracy
- Easy Language Change (Multilingual – 12 Language available)
- Commissioning Support Functions:
 - e.g. Proposed Stopping Distance after Teaching Travel
- Minimal Wiring and Maximum Travel Comfort through CANopen Lift
- Diagnosis of Travel Curve on Controller Display
- Comfortable User-Guided Control of Advanced Settings:
 - e.g. Door Timer, Door Opening
- Supporting Test Functions for Expert On-Site Approval:
 - UCM Test
 - Brake Test
 - Limit Stop Switches Test
 - Buffer Test
 - Safety Gear Test
 - Run-Time Test
- Advanced Diagnostics:
 - Logbook
 - Statistics
 - CAN Node List
 - Parameter Printout Including All Connected Nodes
- Virtual Console Allows Central Diagnosis of Installed Component Parameters

LIFT CONTROL COMPONENTS OVERVIEW

MAIN CANOPEN COMPONENTS

Our lift controls follow a reliable modular bp-control concept. Various add-on modules can be used to meet even the most demanding customer requirements.

■ CIO-01A

CANopen Lift Input-Output Module
The CAN-I/O module makes 32 calls available via the CANopen bus. Status LEDs facilitate initial rapid diagnosis of the CAN bus.

■ CLK-03A

CANopen Lift Power Board
For transmission of the lift car signals via the CANopen bus to the processor. Status LEDs facilitate initial rapid diagnosis of the CAN bus. SUB-D 9-pin interface for CANopen absolute value sender can be extended to 32 calls with CLE-01A.

■ CLE-01A

CANopen Lift Power Board Extension
For extending CLK to 32 calls.

■ CSI-01C

CANopen Lift Serial Interface
For coupling two CANopen strands.

■ CAP-02A

CANopen Lift Exterior Panel Board
Serves to actuate exterior panel via CANopen bus.

■ CWI-01A

CANopen Lift Wireless Interface (WLAN)
For access via WLAN to CANopen bus. WLAN-capable end device required (smartphone, tablet, ...) Other variant available in housing (CWI-01G)

ORDERING DETAILS

Serie	Description	Type designation	Material no.
C10	-	C10-01A	103024112

	WLAN in housing	CWI-01G /WLAN in housing	103024269

TOP OF CAR UNIT

TOP OF CAR CONTROL UNIT

Equipped with the CANopen components like the CLK-03A the Top of Car control unit is used to combine the car signals and to transmit those via traveling cable to the Lift control unit.

Furthermore, it contains the terminals for all electrical car components.

Our standard Top of Car Control Unit combines the following:

- 36 Core Travelling Cable
- In- and Outputs for two Doors (Door Contacts, End Limit Switches, Power Supply, Door Operator, Door Status, Light Curtain)
- Shaft Light Switch, Power Socket
- Power Supply 230 VAC and 24 VDC
- Inputs for Positioning Sensor, Load Measurements, Emergency Communication and Alarm Push Buttons
- CAN Ring Line
- Outputs Cabin Light and Cabin Fan

Other features are possible in the Enhanced Level

UNINTERRUPTIBLE POWER SUPPLIES UPS

UPS – UNINTERRUPTIBLE POWER SUPPLIES

Travelling to the next station without an emergency stop in the event of a power failure, having enough power for all the emergency and communication systems and being maintenance-friendly are the key requirements for an Uninterruptible Power Supplies (UPS).

Combined with the right UPS for your application our Lift Control System is ready to take over the necessary control in the event of a power failure.

ORDERING DETAILS

FREQUENCY INVERTERS

ENTRY – SMART – ENHANCED

FREQUENCY INVERTERS

For optimal control of the speed of your lift machines, you choose the most suitable frequency inverter.

Depending on your application the frequency inverter can be integrated in the lift control cabinet, installed in a separate power unit cabinet or directly mounted into the shaft head. Our lift control system supports all kind of frequency inverters.

Our **ENTRY LEVEL** and **SMART** Package is prepared for the use of some standard frequency inverters. In the **ENHANCED** Package you can choose whatever frequency inverter is needed.

LIFT SHAFT CABLING AND INSTALLATION OVERVIEW

LIFT SHAFT CABLING AND INSTALLATION

Everything is ready to provide the cabling for the shaft. Whether without a machine room or with a machine room above or below, the installation material is individually adapted to your application.

Easy plug and play solutions are provided to connect all necessary lift equipment in the shaft head, the shaft itself and the shaft pit. The online configurator ensures fast and easy selection of required cabling including the individual cable lengths.

Shaft Lighting and additional shaft installation material are also part of our scope. In doing so, we either meet your individual specifications or, after consultation, can propose the best possible solution for the asked application

ABSOLUTE ENCODER SYSTEM OVERVIEW

ABSOLUTE ENCODER SYSTEM

Ensuring a safe and dependable ride every time is your and our goal. Different types of Lift Absolute Encoder Systems allow precise vertical lift and speed measurement control.

In combination our Lift Control System and the Lift Absolute Encoder Systems perform multiple tasks to ensure the safe and effective operation of the lift:

- Lift Frequency Inverter and Motor Communication
- Lift Speed Control
- Lift Door Control
- Vertical Positioning

Various systems are known in the lift market. The **ENTRY LEVEL** Package and the **SMART** Package are prepared for two standard systems. In the **ENHANCED** Package all kind of Absolute Encoder Systems can be provided.

Specification

ENTRY LEVEL

- Limax02
- Toothed Belt Absolute Encoder (AWG)

SMART

- Limax02

ENHANCED

Customized:
All systems:
LIMAX02, LIMAX33CP,
Cedes APS and
iDiscovery ,
Ants LES02,
AWG

Our Lift Control Systems are ready for the application of Safe and Absolute Positioning Systems. Also with the **ENHANCED** PACKAGE we can provide such safe absolute encoder systems known in the market.

Satisfying functional safety requirements those systems can be used for safety-relevant switching and control functions (up to SIL3) that depend on the position and the speed of the car.

Most common Safety-Relevant Functions Included:

- Deceleration Control at the Shaft Ends
- End Limit and Inspection End Limit Switch Function
- Door-Bridging and Preparatory Actions when Entering/Leaving the Floor Level Position
- Protection against Unintended Car Movement (UCM) with Open Doors
- Triggering of Safety Gear at Overspeed

TABLEAUS AND DISPLAYS OVERVIEW

TABLEAUS AND DISPLAYS – COP – LOP – LIP

Sufficiently simple and user-friendliness remain the focus for all visible user interfaces of the lift application.

Our knowledge and experience support you best to find the optimal solution together with external partners.

- Standard Button Design
- Touchless Button Design
- CANopen Integrated

Hygienic/Pandemic Options:

- Food Tableau
- Call by Mobile Phone

CAN DISPLAYS

CAN Cabin LCD

CAN Floor LCD

OTHER SHAFT ACCESSORIES

OVERVIEW AND ORDERING DETAILS

ACCESSORIES

For the completion of the Full Service Package additional shaft accessories can be provided.

- Inspection Handheld Control
- Top of Car Inspection Handheld
- Pit Handheld
- Installation Handheld

- Lift Emergency Call Systems
- Pit Ladder
- Cabin Apron
- Traction Pulley Cover

and much more.

LIFT EMERGENCY PHONES AND ACCESSORIES

In order to expand our position as a system provider and to complete our own product portfolio, we entered into cooperation with 2N as a specialist with lift emergency call systems. We are official distributor of their Lift emergency call system portfolio.

Type Designation	Material No.

CONFIGURATION CREATE YOUR LIFT CONTROL SYSTEM.

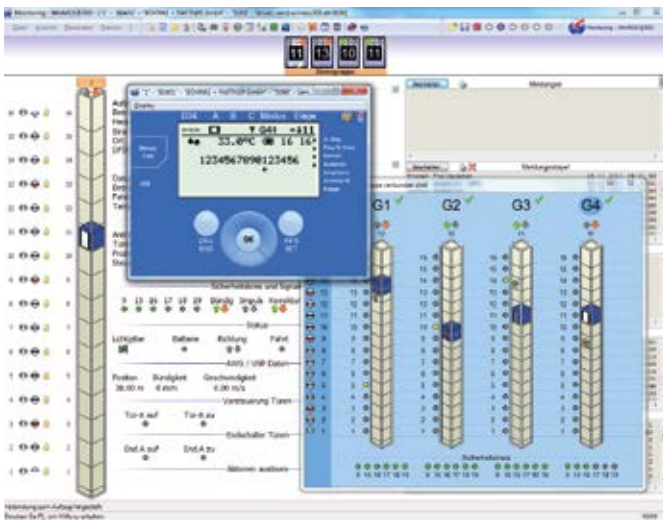

By using our Online configuration tool, you can easily create your lift control system.
Step by step the necessary equipment is defined and ready to ask for the offer.

LIFT MONITORING SYSTEMS

WinMOS®300

WinMOS®300

As part of our control concept, all controllers are prepared for remote data transfer with the WinMOS®300 program. For different areas of application, various software modules are available which can be configured and tuned precisely for your application. With WinMOS®300, any number of control systems from different manufacturers can be monitored. In this way, you can check the number of lift operations, view current messages and e.g. parametrise holding times in the control system.

A service visit is made before errors in performance turn in malfunctions. Instead of time-orientated maintenance, demand-orientated maintenance is carried out based on the number of lift travels, operating hours or when a scheduled appointment is reached. This increases the availability of the lift system and reduces costs.

Available modules:

- Monitoring
- Diagnostics
- Statistics
- Overview with Layout Maps
- Broadcast Calls
- Fault Registration

LIFT MONITORING SYSTEMS

Lift2CLOUD®

Lift2CLOUD®

Location-independent access to all lift systems

Lift2CLOUD® is our new cloud solution for the bp308 and bp408 controller.

With it you got access to your elevators at every time, over web browser or any internet capable (mobile) device. Due to the smart list of devices, you got direct and clearly arranged access to all your elevators.

At the dashboard you can see any necessary data in detail: the moving direction, the current level of the elevator, the door state, the levelling of the car, the state of the safety circuit, the trip counter, the hour meter, the temperature of the cabinet and the position of the elevator in a map.

Furthermore, it's possible, to see the evaluated data as bar chart, line chart or pie chart. There you can specify a time limit to the evaluated values.

REPLACE AND UPGRADE SYSTEM THE MODULAR CONVERSION SOLUTION

THE MODULAR CONVERSION SOLUTION

With the Replace and Upgrade Systems, you have the possibility to offer your customer a control modernisation in a quick and easy way.

The Replace and Upgrade Systems are prepared by us in such a way that you only have to dismantle the old processor and afterwards mount the replacement controller.

- No Long Downtimes
- Cost-Efficient Conversion Solution
- Modularly Expandable

bp300

bp302

bp408

CONSTRUCTION LIFT SOLUTION

- Control with Safety Integrity 3 (SIL3)
- Safety Logic with Key Transfer System in the Access Level (Ground Level)
- Monitoring of the Car with a Solenoid Interlock (e.g. AZM161)
- Safety Redundancy using Position Switches (Upper and Lower Limit Switches)
- Frequency Converter
- Factory Parameter Setting

SAFE SOLUTIONS FOR EVERY LIFT. EVERYWHERE.

Our customers lift systems are at the focus of our attention. Regardless if it's a new system or a modernisation – with our years of experience we identify an individual or standardised solution according to your requirements. Our common goal is to guarantee the safe movement of the lift system for the users.

Schmersal Böhnke + Partner is a member of the Schmersal Group. With its products, the ownermanaged Schmersal Group has dedicated itself to the safety of people and machines for many decades. The company was founded in 1945, and is represented by seven manufacturing sites on three continents and with its own companies and sales partners in more than 60 nations. In the demanding field of machine safety, the Schmersal Group is one of the international market and competence leaders. Based on a comprehensive product portfolio, the company's approximately 2000 employees develop and plan complete safety-related system solutions.

For over 50 years we have supplied high-quality components for the lift industry. With the acquisition of Böhnke + Partner to the Schmersal Group, we took over the system concept to our lift area. Since then, the product portfolio – with control systems and components – includes all necessary elements for equipping a lift system from electrical point of view.

We supply lift manufacturers with our products all over the world. The Schmersal Group has four production plants in Germany and one each in Brazil, China and India. We offer the flexibility of a medium-sized company, combined with the international presence of a company group.
